BookLed®: the first web enhanced cardboard book

Children now have an exciting new way of reading, a perfect blend of web technology and the matchless pleasure of the written word on paper.

At SMAU 2009, RoboToons Publishing presents BookLed®. This board book for young children uses an innovative system of page identification along with graphic, L.E.D. animation and an amazing web interface, all within a traditional, illustrated story.

In appearance, BookLed® is a normal book with thick card pages. At the top of the book, there is a small USB port and switch.

Connecting the BookLed® to your PC and pointing your web browser to www.bookled.com, the web server identifies the book's ISBN code and delivers the multimedia content synchronized with the turning of the pages.

BookLed® is available now, priced at 49.90 Euros.

More information on the BookLed® may be found on www.bookled.com
